NOVELTY OF OUR PROJECT

- **Name of Website**

  The name 'HotWheelz' is inspired from a toy car making company. We took this name because it is more catchy and fancy.

- **Unique approach**

  Here we tried to make an integrated rental and dealing website. Before purchasing a car people have to make many comparisons and need to do research a lot. In the compact schedule we tried to lessen the efforts of car dealing while maintaining the privacy of customers.

  Therefore, we came up with the idea that automates the documents verification for selling a new/old car. Here the seller just has to upload all documents and images of the car and they get notification from the admin for any updates and the buyer can directly contact the seller and can ask questions.

- **One of a kind**

  This website is one of a kind as apart from a regular car dealing website, it has features such as:

  - **FAQs-** There is a page where a customer can post his/her query that they want to be answered about working on the website and the admin is able to view them and can answer them.

  - **Integrated Rental/Dealing Website-** The website is unique in its own as no other website provides an integrated platform for car selling as well as for rent

  - **Notification-** This works differently for seller and buyer. Seller/Dealer gets notification about vehicle document update from admin and from customers who wish to buy his/her car. Buyer gets notification about the confirmation of deals and some other notification about profile updates etc.

and few others.
